

# Smart Search

VIGIL CLOUD™ SmartSearch functionality lets you identify and review events of interest quickly and easily – resulting in more accurate and efficient investigations.

Video review can often be a long and tedious task, SmartSearch eliminates the need to review hours of recorded video. Motion footage within a particular region of the scene is displayed along the timeline, streamlining the review process and providing easily accessible results.

VIGIL CLOUD SmartSearch provides seamless functionality between **3xLOGIC** VIGIL server and client-based solutions and our exciting Cloud offering. SmartSearch allows you to quickly filter or narrow down your footage search results to areas of interest within a playback field-of view.

## How does it work?

Simply select the region or regions of interest and select “Apply Filter” search. Footage of any motion detected within the region(s) is displayed along the playback timeline for easy review. If you don’t find the results you need, you can refine your regions and search again. Motion sensitivity can also be adjusted higher or lower to further refine your results. From your search results, you can capture video clips and/or still images to save into a new or existing case.

## Benefits:

- » More efficient video footage searches.
- » Quickly navigate through large amounts of video.
- » Narrow down search results to areas of interest.
- » Now available in VIGIL CLOUD mobile app.

## Mobile App

Although traditional laptops are more lightweight and portable than ever, they're not always convenient for quickly looking at live video or following along on a case. The VIGIL CLOUD™ Mobile App provides convenience for those who want to complete critical tasks within VIGIL CLOUD quickly.

The mobile application is intended to make tasks like viewing video/playback, case management, and viewing and reacting to notifications available through common gestures and movements users already know and use in other mobile applications.

The VIGIL CLOUD native Mobile App provides easy access to the VIGIL CLOUD application for users who are away from their computer, offering the ability to view live cameras, play back footage, comment on cases, and react to notifications from their existing iOS and Android smartphones.

## How does it work?

Users simply need an existing VIGIL CLOUD account with at least one camera connected. Once they have created a username and password, they can download the application from the appropriate mobile app store.

## Benefits:

- » Users can access VIGIL CLOUD while away from their laptop or desktop.
- » Quickly and easily navigate through the VIGIL CLOUD application's most important features.
- » Remotely manage permissions and users from your mobile device.
- » Access to all your video and case management data is available anytime, anywhere, from any device.
- » VIGIL NVR Plug-In - Extend the capabilities of the solution with other manufacturers' cameras.
- » Parity with web application.
- » Bring on-prem server redundancy.
