VIDEO MANAGEMENT | VIGIL

What's New in VIGIL 12.0?

VIGIL Server

- **PTZ Camera Events for All Alarms**

As of v12, VIGIL Server now features PTZ Events that are compatible with all available alarm types.

- **New User Permissions**

In VIGIL Server v12, two new User Permissions have been added:
  - ▶ Allow / Disable RapidStream on Live
  - ▶ Own Group Management

- **User Permissions Interface - Search**

VIGIL Server v12 features a new search interface to aid in filtering down the full comprehensive list of available user and group permissions.

- **Alarm Priority**

VIGIL Server 12 features a new Priority field for configured alarms, allowing users to prioritize alarms by instance.

VIGIL Client

- **Expanded Client Connection Counts**

The Client Connections window now features categorized into granular Live, Playback and Other counts.

- **Server Diagnostics Tree Node**

All Server diagnostic tools, including the new Server Performance Monitor, are now easily accessible from a Server's Diagnostics tree node.

- **Playback Cue to Frame**

- **Export POS Search Result as CSV**

VIGIL VCM

- **New Health Monitoring Criteria:**
  - ▶ Monitor MAC Address
  - ▶ Error Code
  - ▶ Team Viewer ID

- **Active Directory Integration :**

VCM can now integrate with an existing Active Directory server to manage VCM users. VCM can also act as an Active Directory proxy for managed VIGIL Server's and their users and user groups.

- **Expanded Network Connection Counts for v12 Servers**

VCM users can now view granular Live, Playback and Other client connection counts for monitored VIGIL Servers.
