BEFORE YOU BEGIN

Let's get you oriented within the various sections required to manage your customers and door controllers.

Customer Registration Portal

It all starts with the Customer Registration Portal (portal.3xlogic.com). This is where you:

- Setup billing information
- Create and manage new customers
- Assign EIDC³² Door Controllers
- View and track invoices to your customers

infinias CLOUD

infinias CLOUD is comprised of two sections- **Home** and **Configuration**.

Toggle back and forth between Home and Configuration using the link in the upper-right corner.

HOME

By default, when you log into the application you will see the Home section. Some of the things available to you in the Home section are:

- See the last 100 live events
- Create, modify, and delete People and Groups (based off of your Role)
- Run Reports
- Monitor and override the normal door status of your doors

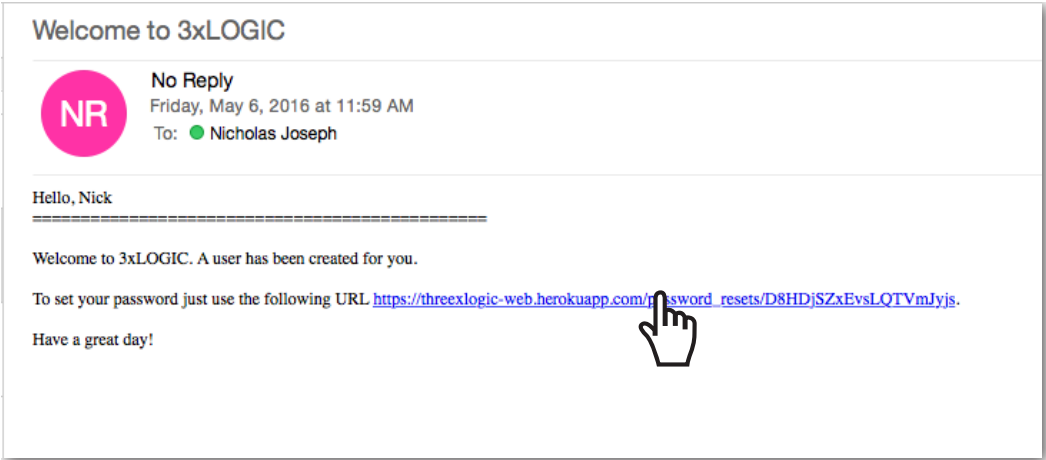

CONFIGURATION

Configuration is for People in the Supervisor or Administrator Role. This is where you will spend most of your time as a Dealer, configuring access control. In the Configuration section you can create and manage:

- Doors
- Schedules
- Groups
- Zones and rules

1.0 Welcome Email

Upon becoming an infinias CLOUD distributor/integrator, you'll receive an email with a link to our new Customer Registration Portal. The portal allows you to create and manage customers and billing, as well as assign door controllers to those customers.

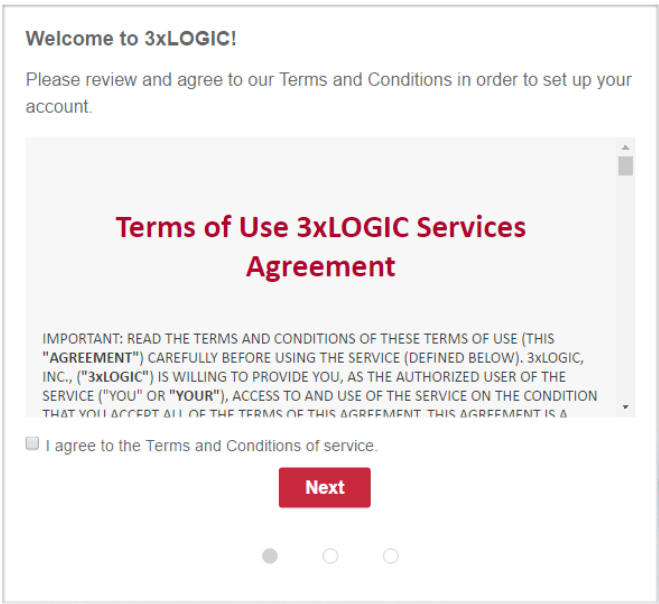

1.1 User Agreement, Credit Card, and Dealer Account

After clicking the link included in your email, you will be prompted to accept the User Agreement, enter your credit card, and create a unique password to enter the Customer Registration Portal. This portal can be accessed at any time in the future using the following URL: <https://portal.3xlogic.com>.

You are at the Customer Registration Portal

HELPFUL HINT

We accept all major credit cards. Mastercard, Visa, Discover, and AMEX.

HELPFUL HINT

The password used for your account must be at least 8 characters long.

You are at the Customer Registration Portal

HELPFUL HINT

If you forget your password, just click the “Forgot Password” link in the bottom right of the login window.

Payment Information

Please provide your payment information in order to setup your account.

HELPFUL HINT

Once a customer's account has been created, they will receive an email inviting the customer to create their password.

If your customer's invitation is misplaced or doesn't arrive as expected due to spam or server rules, please contact support.

Confirm the customer information and select **Next**. Once you confirm the customer's information, an email will be sent to the main contact prompting them to create a password.

Confirm Information

Once you confirm the customer's information, an email will be sent to the main contact prompting them to create a password

Company Name: Fishing in Fishers
Contact: James Clark

HELPFUL HINT

Doors can be added and provisioned to customers through the QR Code setup in Site Access Mobile App (Available from Google Play Store and Apple Store)

2.1.2 Adding a Door Controller to a Customer Account

Click the  button to edit a customer account.

Navigate to the **Devices** Tab and then select the **New Device** button.

HELPFUL HINT

You can add/provision the door controllers to the customer account before physically installing/wiring the eIDC³² door controllers.

The Serial Number and Date Code (REQUIRED for provisioning) can only be found on a sticker on the back of the controller. eIDC³² door controllers MUST have a minimum firmware version of 3.1.61.

Enter in the **Serial Number** and **Date Code** of the eIDC³² Door Controller and click the **Create** button. This is provided on the sticker located on the back of the eIDC³².

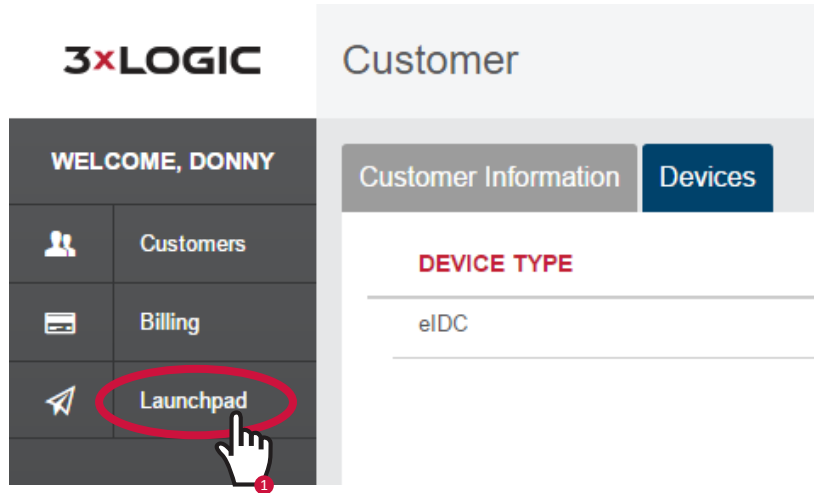

3.0 Power on the eIDC³² Door Controller

Power the eIDC³² Door Controller. Allow 10-15 minutes for the provisioned controller to communicate to the infinias CLOUD Server.

4.0 Launching infinias CLOUD

Dealers can navigate directly to infinias CLOUD from within the Customer Registration Portal, by simply clicking the **Launchpad** Menu Option.

You are in
infinias CLOUD

Here, you and your customer can create users, provision cards, and manage your door controllers.

infinias CLOUD is comprised of two sections - Home and Configuration. When you log into the software everyone lands in the Home Section.

Configuration is for People in the Supervisor Role.

Instead of clicking the Launchpad button within the customer portal, this site can be accessed at any time by using the following URL:

<https://ia.3xlogic.com>

5.0 Configure the eIDC³²

After Launching infinias CLOUD application, click the **Configuration** link in the upper right corner of the software to Create a Door and assign it to an eIDC³².

From the **Doors** Page, select the **Create Door** Action from the menu on the left side.

REMEMBER

If the Serial Number of your door controller doesn't show up, the provisioning may not be complete. Make sure the door controller has power and has access to the internet. It can take up to 15 minutes for the door controller to register with the server once it is powered on. If the door controller still doesn't show up, check the firmware version. Remember, the firmware of the door controller must be at least version 3.1.61.

HELPFUL HINT

If the doors for a customer are unable to communicate to infinias CLOUD, validate that port 18800 outbound traffic is open on the customer's network.

HELPFUL HINT

Door Behavior: This is a combination of two settings: card mode and the lock schedule for the door.

Most importantly, this is your lock schedule for the door.

When adding your first hosted door to a customer's site, infinias CLOUD automatically creates an Always Locked Behavior with your site name.

Most people use card only for the card mode, instead of Card+Pin. The difference is single authentication vs. dual authentication. In order to use card+Pin, you have to purchase a special keypad that allows for both.

Drop down the **Serial Number**: Text Box and select the appropriate Door Controller.

Configure the door properties and then click the **Create** button.

- **Name:** Logical Name of the Door.
- **Time Zone:** Time Zone of the Door Controller.
- **Door Behavior:** Lock Schedule for the Door. Select the default that corresponds with your customer.
- **Secured Zone:** Select the default **Inside** Zone.
- **Unsecured Zone:** Select the default **Outside** Zone.
- **Door Type:** Select the door type that meets your needs. Selecting the Diagram button will show you the wiring diagram for the door type selected.

HELPFUL HINT

Some common miswiring of the eIDC³² or misconfigured firewall/router can cause some unnecessary headaches. Check to make sure you haven't accidentally made these common mistakes:

SYMPTOM: Doors cannot communicate with infinias CLOUD.

PROBLEM: Ensure that TCP Port 18800 is open for outbound traffic on your firewall or router.

SYMPTOM: Cards aren't recognized by the reader.

PROBLEM: The data wires on the reader may have been wired backward causing the reader to mis-read the card code.

SYMPTOM: Doors are unlocked, but when you use your card, the doors lock.

PROBLEM: The relay has been wired backward for fail safe or fail secure.

SYMPTOM: Everytime you open the door, you get a request unlock event in the software instead of a door status event.

PROBLEM: The door contacts have been wired to inputs 2 or 3, instead of input 1. Ensure the door contact is always wired to input 1.

SYMPTOM: All the zones and rules setup in the access software will be backwards and your events will look like people leaving the building when they are really coming into the building.

PROBLEM: You may have wired the reader to the out reader side of the EIDC.

SYMPTOM: PIR bypass is used for when you want to bypass the door forced open event but don't want the door to unlock it. If you wire it to input two the door it will still unlock every time the PIR is tripped.

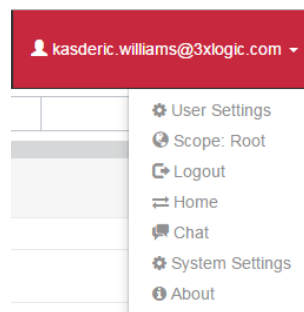

PROBLEM: The PIR may be wired to input 2 for PIR bypass, but should be wired to input 3.

5.1 eIDC³² Wiring Diagram

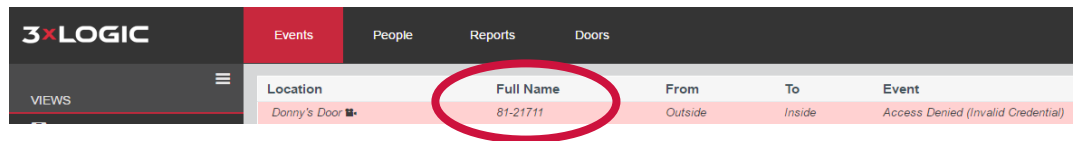

- **Reader 2:** This specifies whether or not you have a second reader wired to the eIDC³² and what direction it provides access.

Select 'HOME' found in the dropdown under your username.

6.0 Assign an Access Card and Modify a Cardholder's Details

Before you modify a cardholder's details and assign them an access card, you need to have the Site Code and Card Code of a card available. To find the Site Code and Card Code of a card, simply **swipe** the card at the reader and look for the corresponding event on the **Events** Page. To navigate to the **Events** Page, click the **3xLOGIC** icon  .

Location	Full Name	From	To	Event
Donny's Door	81-21711	Outside	Inside	Access Denied (Invalid Credential)

HELPFUL HINT

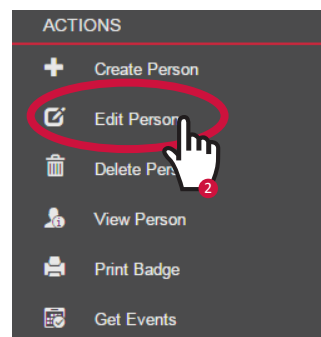

Although infinias CLOUD is a browser based application, you can still double click an item to open it for editing, or right-click on items to expose additional menu options.

Select the **People** tab. Click the **User's Record** once. This will highlight the user red, indicating that is the record you have selected.

Provide the **Person** with the proper **Site Code**, **Card Code**, and **Group Membership** and then click the **Save** button.

Click the **Edit** button from the left menu.

HELPFUL HINT

infinias CLOUD has common pre built-in configuration settings that users can utilize to quickly get perimeter access control doors online, and grant cardholders access to the doors.

REMEMBER

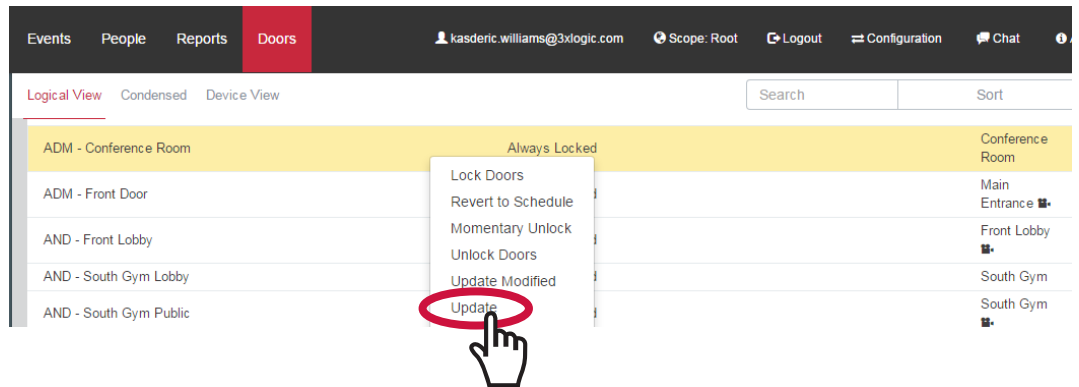

We recommend that you get in the habit of updating your doors after creating access privileges.

Doors that need to be updated will be marked in the status column with a yellow triangle.

Right-Click on the door you need to update, this will expose an additional menu to select Update from. By selecting "Update Modified" you can update all doors that require an update at once.

7.0 Update Door

Navigate to the **Doors** Page and right-click the customer's door and select the **Update** option. This will push all the information from the server back down to the eIDC³².

Your customer should now have an account and card registered within Intelli-M Access Hosted, using our simple, built-in settings.

For advanced configuration please refer to our User Guide.
