

Scheduled Archiving

VIGIL™ Server's VIGIL Archive plugin (included with VIGIL Server free-of-charge) can now be configured for scheduled archiving. Now your surveillance data (video, audio, POS, etc...) can be routinely archived without the need for staff or LPO to perform the archive manually. For enterprise-level networks utilizing our VIGIL Central Management (VCM) software, network administrators can be notified of failed scheduled archives via the VCM Health Monitor.

60 FPS Video and H.265+ Codec Support

Keeping up with advancements in video technology is a main focus at 3xLOGIC and we are happy to announce support for 60 FPS recording and playback across the VIGIL suite as well as support for the H.265+ CODEC.

- 60 FPS video is now supported in all pertinent VIGIL utilities. This frame speed makes for incredibly smooth video, allowing LPO to easily analyze fine details within an image.
- The H.265+ smart codec can greatly improve network performance and the overall user-experience by substantially reducing bandwidth and storage requirements of video files. Save money on storage while reducing data overhead.

Improved VIGIL Decoder Setup Utility

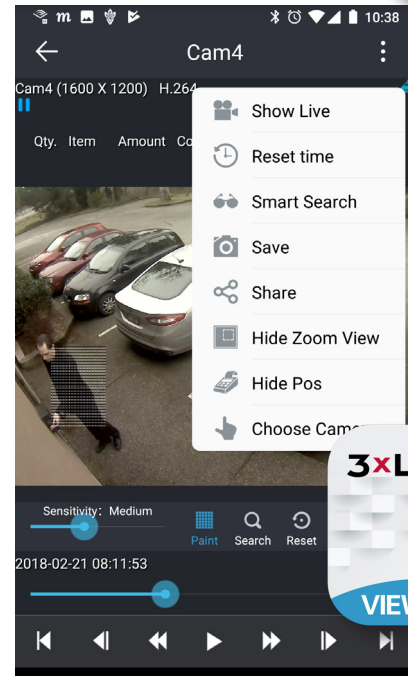

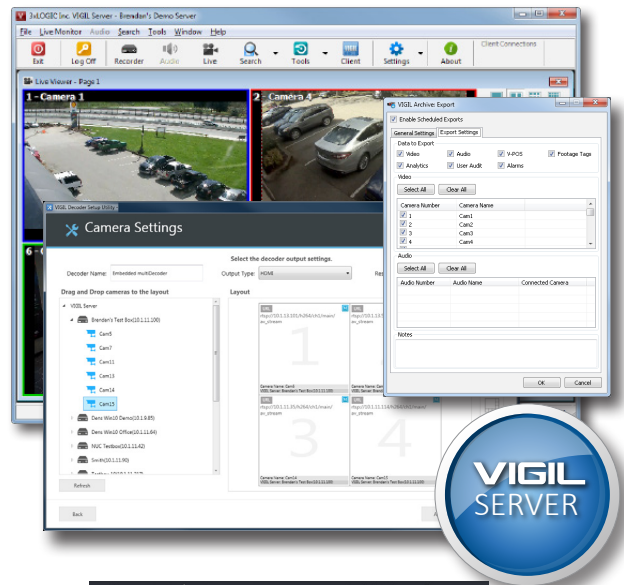

3xLOGIC has made several improvements to the VIGIL Decoder Utility UI to increase ease-of-use:

- A new consolidated UI helps to simplify and expedite decoder setup.
- 1x2 layout support gives users an even larger variety of available display layouts for their decoder's output.

View Lite II Smart Search Support

In VIGIL 10.5, 3xLOGIC has added Smart Search support to the VIGIL Server HTTP interface, allowing for smart search queries from web-based applications including 3xLOGIC's in-house mobile application, 3xLOGIC View Lite II (iOS and Android versions available).

View Lite II Users can now easily narrow down points-of-interest within larger playback clips by creating a smart search mask over an area of a camera's image. Only footage containing motion in the masked regions will be returned for their smart search query. Eliminate the need for scrubbing through long videos. VIGIL Smart Search is now mobile.
