ACCESS CONTROL | **infinias**

THE SITUATION

On November 8, 2016, Nevada voters approved Question 2, which legalizes, regulates, and taxes recreational marijuana throughout the state. Beginning on January 1, 2017, it will allow adults, age 21 or older, to possess up to one ounce of marijuana and grow up to six plants. Marijuana is largely a cash business and with high-value inventory also on premise, security is of utmost concern for this growing business.

THE CHALLENGE

Harris Tec is a relatively new company and is helmed by industry veteran Justin Harris. “Our customer does both local cultivation of marijuana plants, as well marijuana production, which means marijuana by-products. Cultivation and production are in two separate parts of the facility, require two different licenses, and have two different sets of employees and operating procedures.”

THE SOLUTION

The overall facility is approximately 30,000 square feet in size, with a 3xLOGIC infinias system managing access for eight doors and an inventory cage. Except for one exterior door, all other managed doors are on the interior of the facility. “I’ve been installing infinias for about five years and I love the system.”

commented Harris. “I like the system’s flexibility. We have it programmed to create a man trap at the main entrance—only one door can be opened at a time. We also can initiate lock down with the system, automatically halting all ingress and egress.”

“When we’re asked if the system can do this or do that, I tell my employees, ‘Never say no,’ because this system can do virtually anything.”

— Justin Harris, Owner,
Harris Tec MSP

THE BENEFITS

- Harris Tec is the Managed Services Provider (MSP) for the end user. They perform day-to-day system management, troubleshoot any issues, make all changes to schedules and groups, and turn access cards on and off.
- The end user’s employees are organized into several groups, each with different access privileges in terms of day and time and location.
- By closely managing the seven interior doors, Harris Tec staff make sure the 40+ employees are going only where they are explicitly approved to go.

THE BENEFITS (CONTINUED)

- It's not practical to give out keys to the facility, so electronic access control is crucial to tight security. In the marijuana business, there is a large amount of turnover, so it's essential that Harris Tec be able to program access badges both on and off immediately.

THE PRODUCTS

There's a reason why 3xLOGIC infinias access control solutions have been trusted for many years. Whether leveraging cloud or server-based options, 3xLOGIC provides cost-effective security solutions that are easy to manage, simple to install, and scale with your changing needs. infinias is available in four versions offering features and benefits to fit any size operation and any security challenge:

- **infinias CLOUD 6.6**
- **infinias ESSENTIALS**
- **infinias PROFESSIONAL**
- **infinias CORPORATE**
